# Automating Outlook with VFP

- How many Outlook versions are there?
- Outlook Automation four ways:
  - VFP drives Outlook
  - Outlook drives VFP
  - Drag and drop
  - Outlook events bound to VFP
- Practical Examples

# Outlook Version-itis

- Outlook Express is not Outlook
- Outlook Corporate / Workgroup (C/W) different from Internet version (Help/About)
  - MAPI designed for C/W only!
- Outlook 97, 2000, XP (8,9,10) different
- Security Patches introduce new challenges

# Security Patches

# Security Patches

# Security Patches

- Some settings can be modified in Exchange environments ONLY!
- Two 3<sup>rd</sup> party workarounds:
- Outlook Redemption \$199  
Extended MAPI
  - Many more capabilities, too!
- ClickYes \$free

# Models of Automation

- VFP Drives Outlook
- Outlook Drives VFP
- Event-Binding
- Drag-and-drop

# Basics of Automation

- Outlook and VFP are objects
- Alter properties, invoke methods
- Study with Object Browser
- Register in IntelliSense
- RTFM – Help and MSKB ~98%,  
Google answers the last 2%

# VFP Driving Outlook

- Programmer's in charge (Inmates)
- Can be performed in background
- “Classic” automation

**Pros:** We know what we're doing

**Cons:** We don't know what *they* are doing!

# Outlook Driving VFP

- Outlook VBA Project or VBScript Form code calls VFP COM Server *or* VFP ODBC/OLEDB

**Pros:** Driven by user via Outlook

**Cons:** Dependent on Outlook VBx error-handling. Outlook form must be installed.

# Event-Binding

- VFP methods fire as Outlook events occur

**Pros:** No need to poll or sleep

**Cons:** Tightly-bound and synchronous

# Outlook → VFP Drag and Drop

- Ignore the drag contents, text
- Use the **ActiveExplorer** property of Outlook
- **Explorers** are the major interfaces
- (**Inspectors** are the little dialogs, like email)
- **Outlook.ActiveExplorer.Selection** has a collection of all of the selected object that were just dragged

# Practical Examples

1. Send an email by driving Outlook from VFP
2. Extract email contacts from email
3. Log an email by driving VFP from Outlook
4. Fire VFP Code when Outlook gets an incoming email

# Summary

- Different versions can determine appropriate solutions or limitations
- Different models of automation
  - VFP driving Outlook
  - Outlook driving VFP
  - Event-binding
  - Drag and drop
- Code solutions to fit the problem's needs
